DOB : 07/02/2004

Education

- **University of Transport Ho Chi Minh City** — Ho Chi Minh City, Vietnam
  Bachelor of Information Technology — *Sep. 2022 – Apr. 2026*

Experience

- **Vinova** — Ho Chi Minh City, Vietnam
  DevOps Engineer — *Apr. 2025 – Present*
  - **Cloud-Native Microservices on Azure**: Architected a serverless microservice platform across the corporate Azure tenant, decoupling asynchronous workloads via Azure Service Bus and dynamically scaling compute and database tiers using Azure Container Apps and Serverless SQL; secured API routing through Front Door, API Management, and Entra ID SSO.
  - **High-Availability AWS Architecture**: Engineered fault-tolerant production environments by isolating multi-instance Amazon ECS clusters and RDS within Private Subnets behind NAT Gateways and ALBs; accelerated content delivery and mitigated edge threats using ElastiCache, CloudFront, and AWS WAF.
  - **Infrastructure as Code & CI/CD Automation**: Standardized multi-environment provisioning across AWS and Azure using modular Terraform and Terragrunt templates, while building GitLab CI/CD pipelines for Dockerized workloads featuring automated pre-rollback error-log collection to speed up incident recovery.
  - **Full-Stack Observability & Cost-Effective Ops**: Deployed centralized monitoring and log aggregation stacks (Prometheus, Grafana, Loki, and CloudWatch) to proactively detect container anomalies; optimized single-EC2 Docker setups and serverless tasks (Lambda, S3, SES, Route 53) for lightweight client workloads.
  - **Enterprise Identity & Tenant Administration**: Governed the corporate Microsoft 365 and Entra ID tenant, enforcing role-based access control (RBAC), managing user lifecycles, and structuring SharePoint and Microsoft Teams environments to streamline cross-departmental collaboration.
- **Vinova** — Ho Chi Minh City, Vietnam
  DevOps Engineer Intern — *Feb. 2025 – Apr. 2025*
  - **Containerization & Environment Setup**: Dockerized multi-tier web applications and configured reproducible development and staging environments on Linux servers using Docker Compose, Nginx, and Apache2.
  - **CI/CD Pipeline Assistance**: Assisted in migrating manual deployments to automated GitLab CI workflows and authored Bash scripts to automate routine log rotation, health checks, and database backups.
  - **Cloud Fundamentals & Monitoring**: Provisioned core AWS infrastructure (VPC, EC2, S3, IAM) using Terraform and supported system health monitoring via Grafana dashboards.
- **University of Transport Ho Chi Minh City** — Ho Chi Minh City, Vietnam
  IT Support Intern — *Jun. 2024 – Dec. 2024*
  - **Network Design & Routing**: Designed and configured departmental network topologies (LAN/WAN), implementing Inter-VLAN routing and managing enterprise Xirrus wireless infrastructure.
  - **Linux & System Administration**: Administered Debian/Ubuntu Linux workstations and internal systems, diagnosing TCP/IP and OSI layer connectivity issues across campus facilities.
  - **Hardware & Infrastructure Maintenance**: Managed IT hardware lifecycle, performed system diagnostics, and provided technical troubleshooting for university laboratories and faculty departments.

Certifications

- **AWS Certified Solutions Architect – Associate (SAA)**: Validated expertise in designing distributed, resilient, high-performing, and cost-optimized cloud architectures on AWS.

Technical Skills

- **Cloud Platforms**: AWS (EC2, ECS, VPC, ALB, NAT Gateway, Lambda,...); Azure (Container Apps, API Management, Front Door, Service Bus, SQL Serverless, Microsoft Entra ID)
- **Infrastructure as Code**: Terraform, Terragrunt, AWS CDK; Terraform state management, resource import, drift detection, configuration review, modular infrastructure
- **CI/CD and Containers**: GitLab CI/CD, Jenkins, Docker, Docker Compose, Kubernetes, deployment automation, rollback and deployment troubleshooting
- **Operating Systems and Scripting**: Linux, Bash, Python
- **Monitoring and Logging**: Prometheus, Grafana, Loki, Amazon CloudWatch
- **Networking and Web Servers**: TCP/IP, OSI model, VPC networking, Nginx, Apache, Cloudflare
- **Databases**: PostgreSQL, MySQL, MongoDB
- **Identity and Administration**: AWS IAM, role-based access control (RBAC), Microsoft Entra ID, Microsoft 365, SharePoint, Microsoft Teams
